### Recommendation Letter

JCommerce SA has been working with us since 05.2012. After three months of close cooperation in web and mobile android development, we experience JCommerce as a very professional company with the right mix of technical and project management skills.

The purpose of the project was development of website, administration backend and a mobile version for "Gouden11" <http://gouden11.hln.be> "Gouden11", which is a fantasy football game based on popular model where participants create a team that consists of actual football players and get points for their performance. Along with core application with player rankings, team edition etc., JCommerce have worked on data import from third party providers (Infostrada Sports, Global Sports Media) and an application for administrators.

Key technologies and components used in creating solutions were as follow:

Java, Struts2, Freemarker, Spring, Ehcache, Hibernate, HTML5, Javascript, jQuery, AJAX, Modernizr, Highcharts, Facebook JavaScript SDK, CSS

Key tools used:

Application Server and Database - Oracle, Eclipse/Netbeans, SQL Developer, Maven, SVN, JIRA

In the framework of cooperation, all work on the project were made in accordance with functional specification. During our collaboration experts from JCommerce showed their strong commitment and knowledge of the project context and requirements - with an absolute minimum of communication overhead. We experience JCommerce as a company with hard working people, very committed to quality and deadlines. I am very grateful for the commitment and the perseverance of JCommerce!

Furthermore, with the full conviction we can recommend JCommerce SA as a good and reliable partner, providing its IT services on the highest possible level.

Gert François
