Recommendation Letter

JCommerce SA has been working with us from 03.2014. After few months of close cooperation, we experience JCommerce as a very professional company with the right mix of technical and project management skills.

The purpose of the "OCEAN" project was the development of a system that - using psychology profile, user behavior and his preferences - creates some kind of social network around places where people can meet each other. System contains three main components: backend Restfull services with whole business logic, background jobs responsible for scoring operations and administration module developed as independent web application. JCommerce was responsible for preparing analyze, whole backend architecture, design services and database, development, testing, bug fixing, deployment on Amazon Web Services (AWS) as a highly available system and documentation.

Key technologies and components used in creating the product were as follow:

- **RESTfull services:** Spring MVC 4, Spring Security, Spring Data, Hibernate, Logback, Apache commons-*
- **Jobs:** Quartz, Spring Core 4, Spring Data, Hibernate, Logback, Apache commons-*
- **Administration module:** PrimeFaces 4, Spring Security, Spring Data, Hibernate, Logback, Apache commons-*, ModelMapper
- **Other:** Gradle, JUnit, Spring Test, Apache Tomcat, PostgreSQL 9.x, AWS(Load Balancer, EC@, Elastic Beanstalk, RDS, S3)

During our collaboration experts from JCommerce showed their strong commitment and knowledge of the project context and requirements. We experience JCommerce as a company with hard working people, very high committed to quality and deadlines.

Furthermore, with the full conviction we can recommend JCommerce SA as an experienced and reliable partner, providing its IT services on the highest possible level.
